Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Listing in the specification application numbers that may not yet be published is not appropriate. Also, the application numbers provided in page 1 and 2 are not US application numbers or are incorrect.

Specification

2. The disclosure is objected to because of the following informalities: See comment above. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1-7** are rejected under 35 U.S.C. 103(a) as being unpatentable over **Patterson et al.** (US 6,059,081) in view of **Wang et al.** (EP 0762047) and **Shyu** (US 5,363,445).

Patterson et al. disclose a wire rewinding box 10 comprising a casing 20, a windlass 90 installed in the accommodating chamber 98, a coil spring 110 installed between the casing and the windlass, a communication wire 52 winding on the windlass with one end of the wire being pulled out of the casing. However, **Patterson et al.** do not disclose a recharge unit installed in the casing and including a generator and a gear mechanism installed between the windlass and the generator, and a press handle installed at one side of the casing.

Wang et al. disclose a recharge unit installed in the casing 1 and including a generator 6 and a gear mechanism 4 installed between the windlass 30 and the generator, for the purpose of generating power for personal electric apparatuses.

Shyu discloses an auxiliary charging device for a mobile phone including a press handle 7 installed at one side of the casing for the purpose of manually generating power for the phone when the battery feeding the phone is used up.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to design the rewinding box as taught by **Patterson et al.** and to provide recharge unit installed in the casing and including a generator and a gear mechanism installed between the windlass and the generator as taught by **Wang et al.** for the purpose of utilizing the energy of the pulled wire and to provide a self contained electric source for the radiotelephone it serves.

It would have been further obvious to one having ordinary skill in the art at the time the invention was made to design the combined box and to provide the press handle installed at one side of the casing as taught by **Shyu** for the purpose of generating the power required for the phone when the battery is used up while continuing to supply other systems through the wire.

Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
